

Insider Data Leaks to Unauthorized Third-Parties

Safeguarding the tech industry
**from insider data leaks to
unauthorized third-parties**

Insiders leaking sensitive information to third-parties can severely impact organizations. When employees with authorized access misuse their privileges to share sensitive information, it exposes the organization to financial losses, potential legal repercussions, and operational disruptions. Because of these risks, it is essential for organizations to implement robust security measures to detect and prevent insider threats.

SITUATION

A technology company discovered that proprietary information was being leaked to unauthorized third-parties. The leak threatened the company's competitive position and raised serious concerns about potential ongoing breaches. Suspicion soon centered on a disgruntled employee with access to the compromised data.

To address these risks, the Client sought assistance from Nisos to confirm whether this individual was responsible for the leaks and to explore solutions for preventing future incidents. The Client required a thorough investigation and effective mitigation controls to protect their sensitive information and secure their internal environment.

The background of the slide features a dark blue field with a pattern of light blue hexagons. Each hexagon contains a white silhouette of a person in a business suit. In the center of the pattern, one hexagon is replaced by a white silhouette of a person wearing a hood and a mask, with red lines radiating from it, suggesting a hacker or a person of interest.

INVESTIGATION

This investigation began with a targeted review of leaked content and Human Resource (HR) records to identify potential suspects. A review of firewall and VPN logs identified one individual who used their personal third-party file share to violate corporate policy, exfiltrate the sensitive data, and provide unauthorized access to a third-party.

Nisos worked with the Client's IT team to implement a device check at the suspect's work location, allowing us to isolate the employee's device for forensic analysis.

Our findings provided conclusive evidence of collusion with external parties. In coordination with physical security, we matched digital logs to surveillance footage, confirming that the employee had been taking photos of sensitive data on their phone and sending it through encrypted chat to unauthorized third-parties.

The background of the slide features a dark blue field with a pattern of light blue hexagons. Each hexagon contains a white silhouette of a person in a business suit. In the center of the pattern, one hexagon is replaced by a white silhouette of a person wearing a fedora and a scarf, with red triangular warning symbols around it.

IMPACT

Our investigation empowered the Client to act decisively by collaborating with their HR and legal teams to terminate the insider without further incident. In addition to identifying and addressing the leak, Nisos provided strategic guidance to strengthen the Client's security posture, including configuring monitoring systems to detect unauthorized file-sharing activity and refining bring your own device (BYOD) policies to enforce device security.

The Client acknowledged that Nisos' intervention not only prevented additional leaks, saving significant resources, but also laid the groundwork for a robust insider threat program that involves engineering, legal, and HR in a coordinated defense against internal risks.

Nisos brought a multifaceted approach to the investigation, seamlessly blending digital forensics with discrete physical security data-gathering techniques that allowed us to collect evidence without alerting the employee.

Let's Connect

Nisos the Managed Intelligence Company®, is a trusted digital investigations partner specializing in unmasking human risk. We operate as an extension of security, risk, legal, people strategy, and trust and safety teams to protect their people and their business. Our open source intelligence services help enterprise teams mitigate risk, make critical decisions, and impose real world consequences.
